Executive, products, customers, returns

05 Findings and recommendations

Evidence-based interpretation and next steps

Project Overview

This retail performance dashboard brings together sales, profitability, product performance, customer and regional segmentation, and product returns into a single management reporting experience.

Business goal

Monitor commercial performance and highlight growth, profitability, customer mix and product-return patterns.

Stakeholder questions

Which brands and regions contribute most to sales? How do profit and sales compare? Where are returns concentrated?

Report experience

A landing page and four analytical views, with year, brand, region, store-type and customer filters shown across pages.

Executive KPI Framework

TOTAL SALES

$1.8M

TOTAL PROFIT

$1.1M

TOTAL ORDERS

270K

AVG ORDER VALUE

$6.5

RETURN RATE

1.0%

Values transcribed from the supplied Executive Overview screenshot.

Data Sources & Modeling

Available evidence

The supplied materials show dashboard screenshots only. They do not identify the underlying dataset, connectors, source-system tables, or ETL steps.

Model to document

Confirm the transaction grain, sales and returns fact tables, product/customer/store dimensions, date relationships, and filter directions from the actual Power BI model.

Measure validation

Confirm how Total Orders, AOV, Return Rate and Profit are calculated; their business definitions cannot be fully verified from screenshots.

Time coverage

Year selectors show 1997 and 1998. Charts show Jan-Dec; verify whether each chart represents one selected year or aggregated periods.

Dashboard Architecture

01

05

Returns Analysis

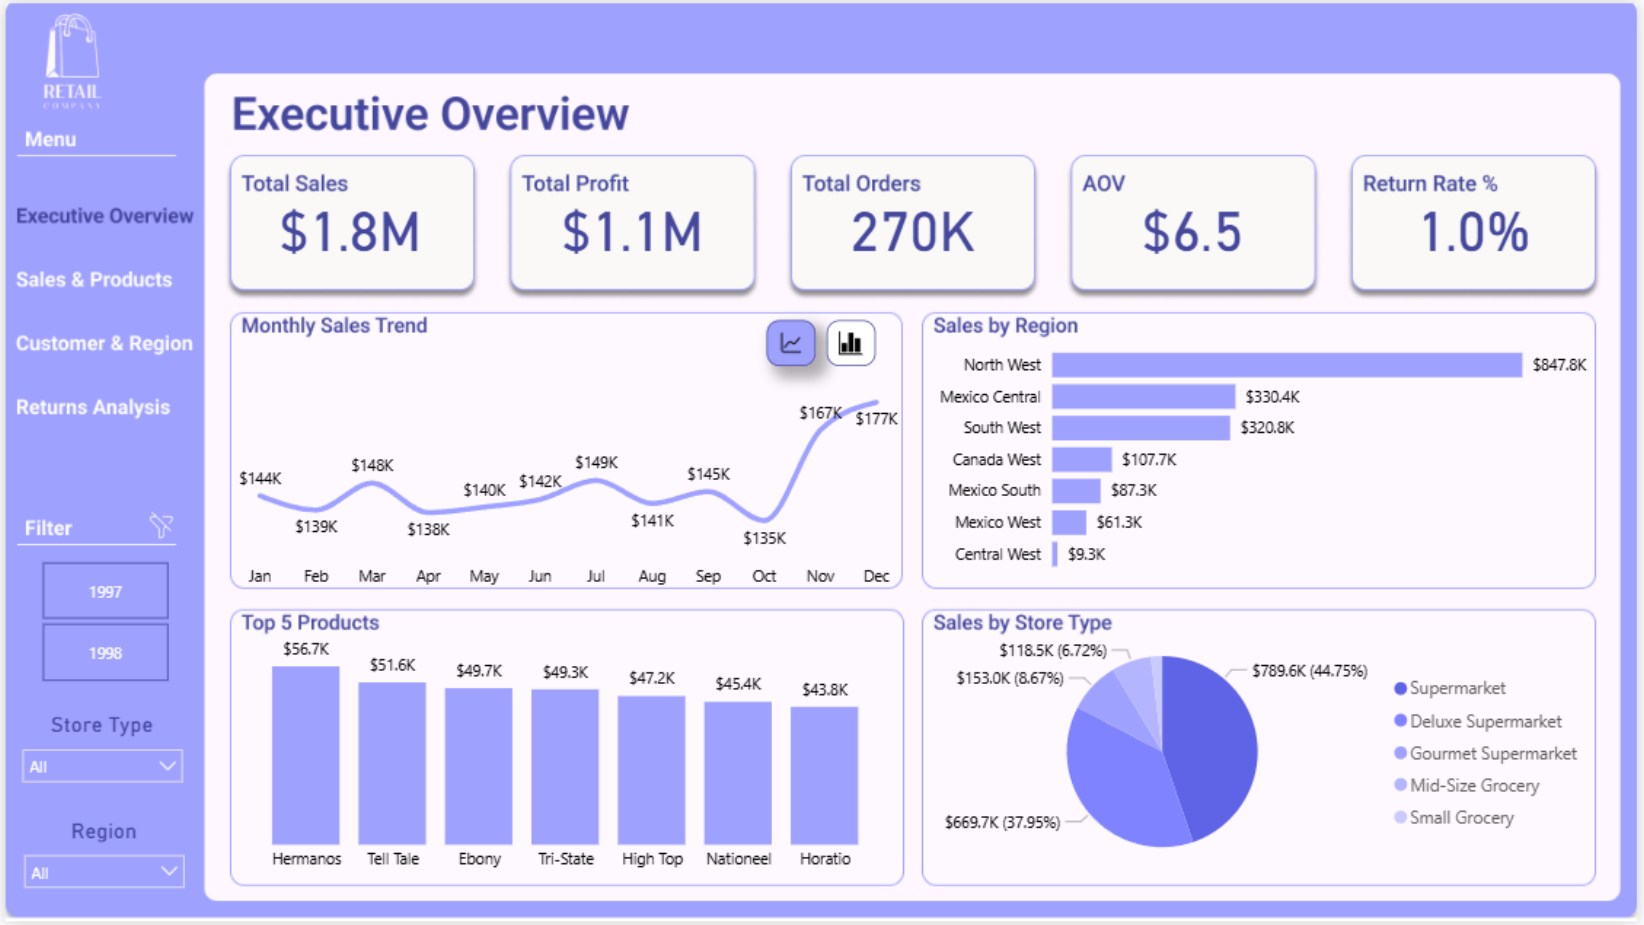

Returns trends and concentration

Landing Page

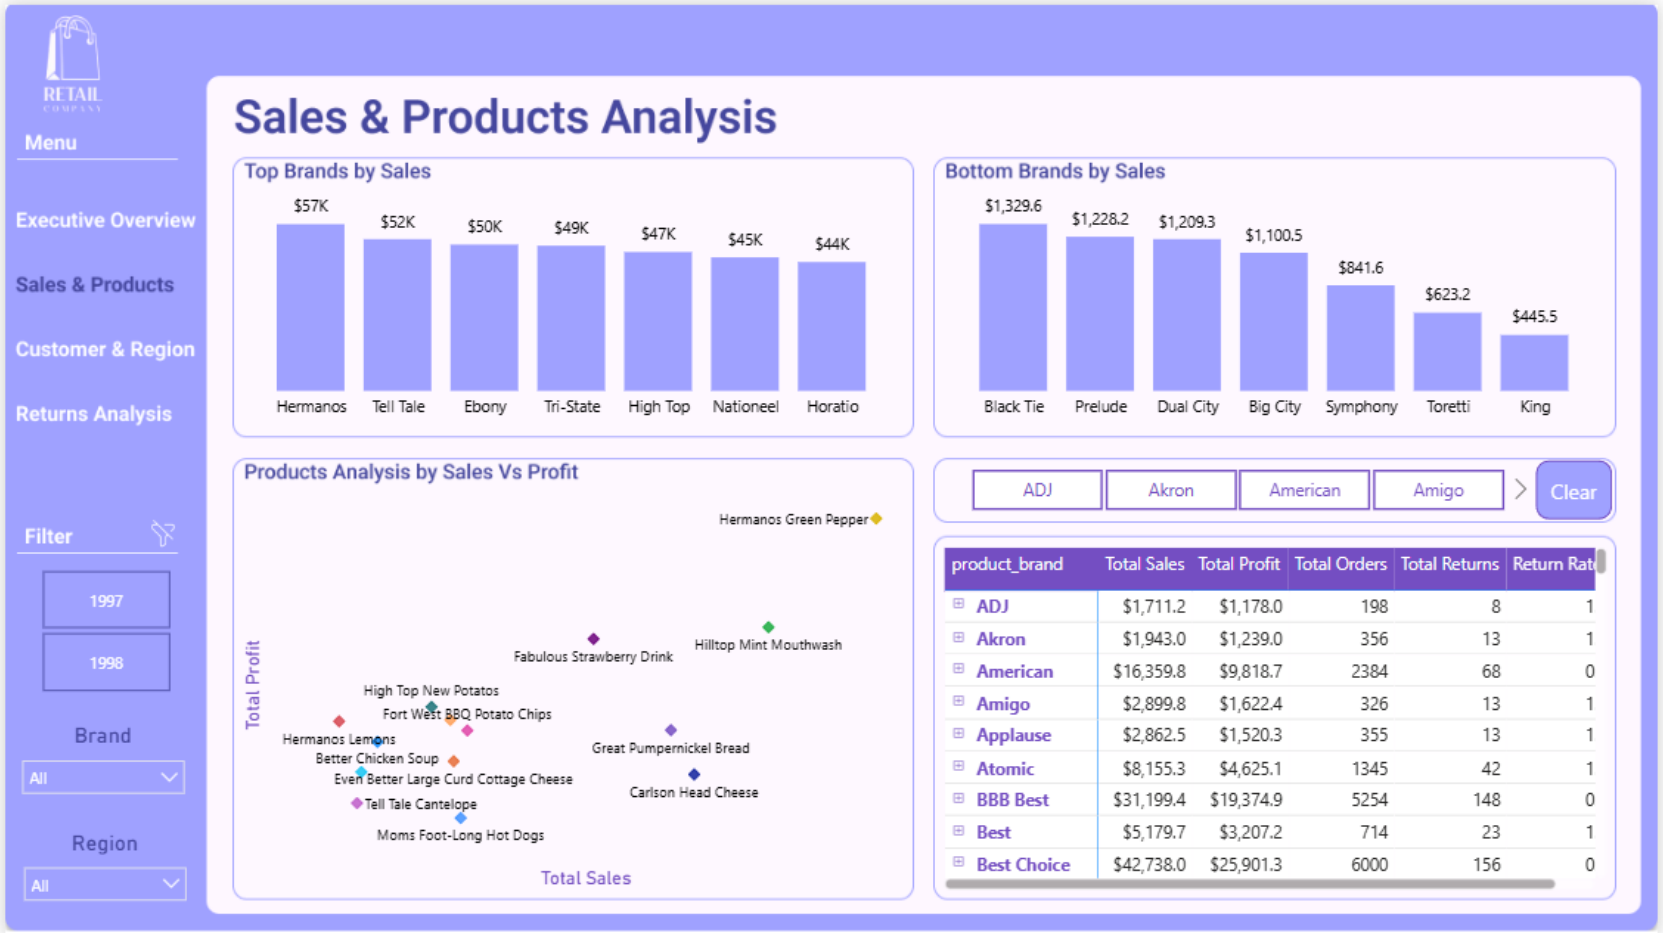

Project introduction and navigation to the four reporting sections.

Executive Overview

Sales, profit, orders, AOV and return rate, with monthly sales, regions, products and store-type mix.

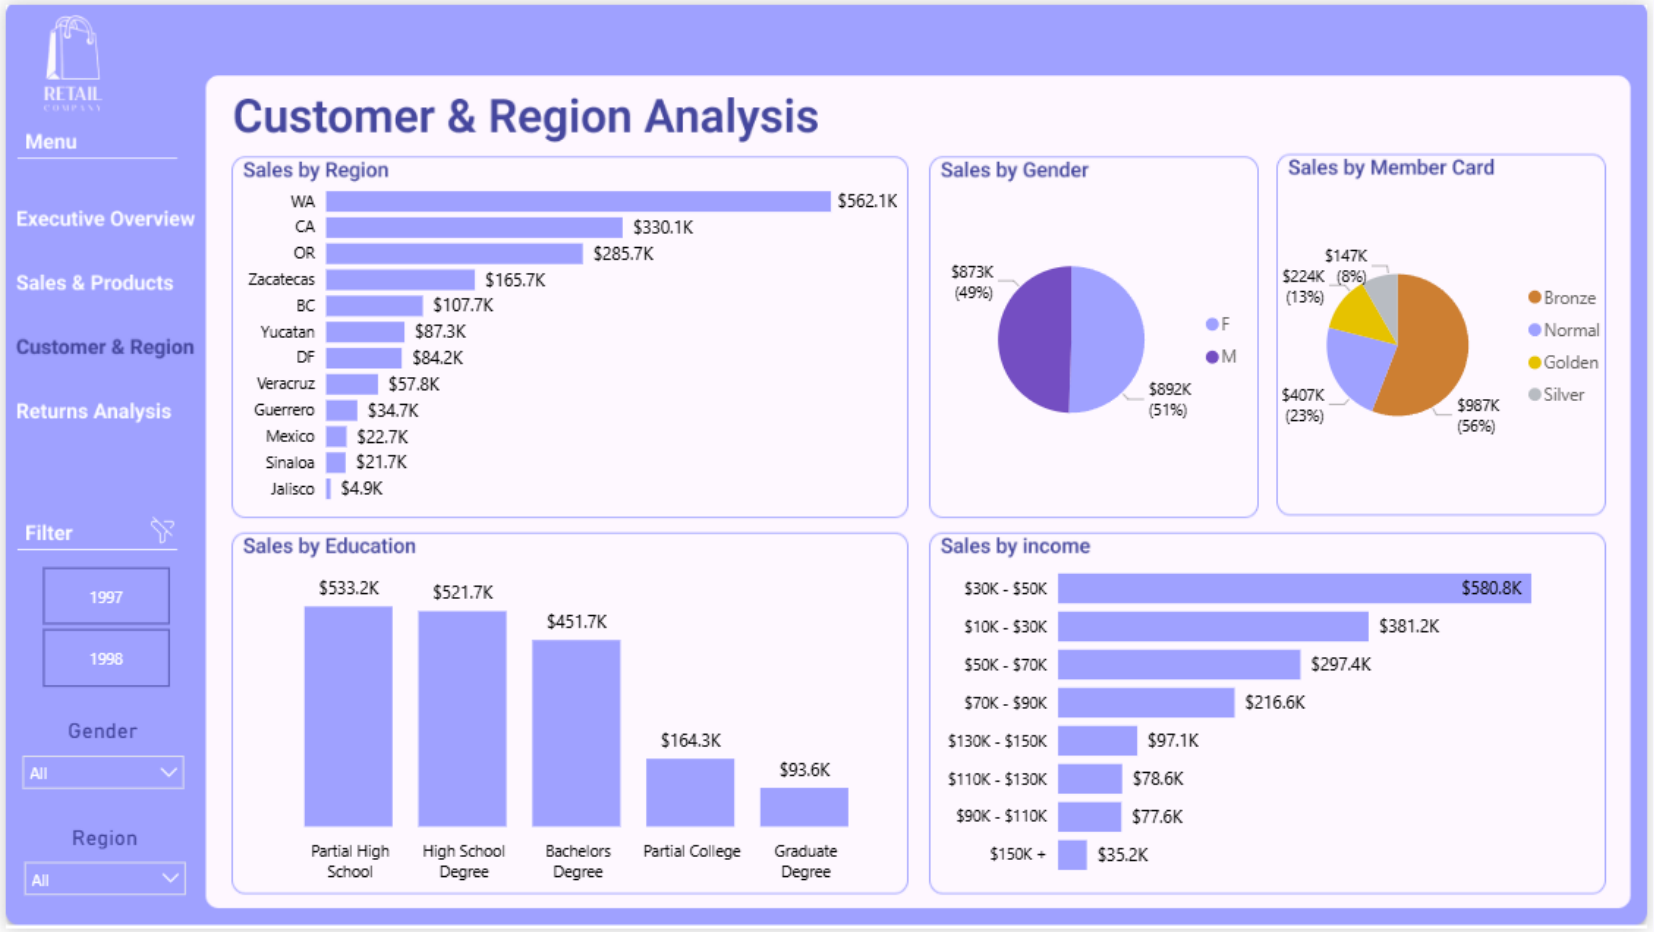

Sales & Products

product_brand	Total Sales	Total Profit	Total Orders	Total Returns	Return Rat
ADJ	$1,711.2	$1,178.0	198	8	1
Akron	$1,943.0	$1,239.0	356	13	1
American	$16,359.8	$9,818.7	2384	68	0
Amigo	$2,899.8	$1,622.4	326	13	1
Applause	$2,862.5	$1,520.3	355	13	1
Atomic	$8,155.3	$4,625.1	1345	42	1
BBB Best	$31,199.4	$19,374.9	5254	148	0
Best	$5,179.7	$3,207.2	714	23	1
Best Choice	$42,738.0	$25,901.3	6000	156	0

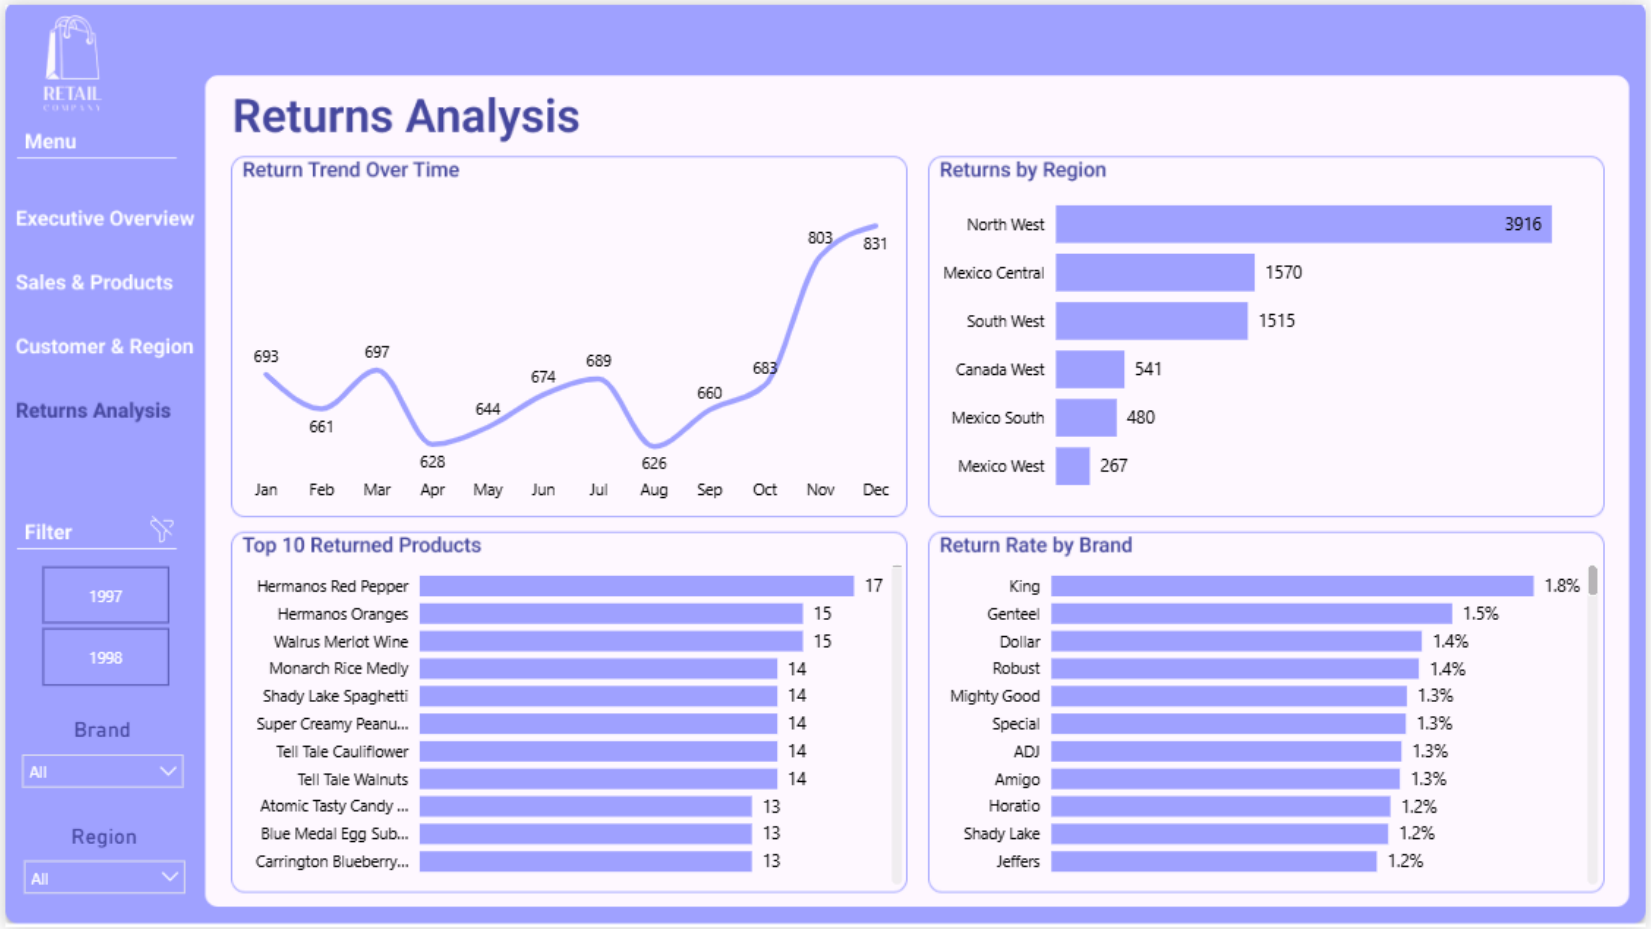

Top/bottom brands, product sales-versus-profit scatter, and detailed brand-level table.

Customer & Region

Regional sales distribution and customer mix by gender, membership, education and income.

Returns Analysis

Monthly returns, regions, returned products and brand-level return rates.

Observed Insights

Commercial scale

Executive Overview displays approximately $1.8M in sales and $1.1M in profit, with 270K orders and $6.5 AOV.

Regional concentration

North West leads the sales-by-region chart at about $847.8K. Washington (WA) leads the state-level chart at about $562.1K.

Customer mix

Sales by gender appear nearly balanced: female $892K (51%) and male $873K (49%). Bronze membership accounts for about $987K (56%).

Return concentration

North West has the highest displayed return count (3,916). The monthly returns chart rises sharply in November and December.

Business Recommendations

Investigate year-end returns

Compare November-December return volumes with sales volume and product mix to distinguish seasonality from operational issues.

Review regional drivers

Assess North West sales and returns together, using return rates rather than raw counts alone.

Prioritize profitable products

Use the sales-versus-profit view to identify products that generate revenue but contribute less profit.

Analyze customer segments

Compare membership and income segments by sales, AOV, repeat purchasing and profitability before allocating marketing resources.

Methodology & Next Steps

Verified from screenshots

Page structure, visible visuals, filters, headline KPI values, and selected segment/chart labels.

Not yet verified

Raw dataset, data lineage, Power Query transformations, DAX expressions, model schema, refresh cadence and the precise calculation grain.

For portfolio publication

Attach the PBIX file or anonymized data model screenshots, provide DAX measure definitions, and link an interactive Power BI report if public sharing is permitted.

Project status

Documentation based on five supplied screenshots; technical implementation details remain to be confirmed.
